CAT 403 – Computing Infrastructure

2.0 Rubric – Progress Review (20%)

Criteria	Weight	Excellent A/A-	Moderate B+/B/B-	Fair C+/C/C-	Poor D+/D/D-/F
CLO1 (PLO2) - Display efficiency in designing a system, analyzing algorithms, and applying theory of computing to develop system/application					
Progress	30%	1. The project has made excellent progress beyond what was available at the time of the proposal. 2. At least completed above 50% of all modules based on the overall module diagram.	1. The project has made fairly moderate progress beyond what was available at the time of the proposal. 2. At least completed above 30-40% of all modules based on the overall module diagram.	1. The project has made minimal progress beyond what was available at the time of the proposal. 2. At least completed above 20-30% of all modules based on the overall module diagram.	Project has not progressed since the time of the proposal.
Prioritization	10%	Student has excellently prioritized core modules to ensure project will be completed on time.	Student has fairly prioritized the ideas and has come up with some ideas of the of modules to be completed.	Student has weakly prioritized the ideas and has come up with minimal ideas of the of modules to be completed.	Student has poorly prioritized the ideas and has not come up with minimal ideas of the of modules to be completed.
Future Plan	10%	Excellently describe the plan to complete all remaining modules taking into consideration all aspects of the development.	Fairly describe the plan to complete all remaining modules with consideration of all aspects of the development.	Student has very little idea of the plan to complete the remaining module taking into consideration all aspects of the development.	Student has not thought about future aspects of the development.
CLO2 (PLO3) - Apply programming method and research/algorithm to develop systems.					
Implementation	30%	Student has excellently considered all aspects of CI implementation, including design, technique / algorithm, programming, and testing. Excellent explanation on the implementation of the module construction.	Student has spent some time considering all aspects of CI implementation, technique/ algorithm. Fair explanation on the implementation of the module construction	Student has spent little time considering all aspects of CI implementation technique/ algorithm. Roughly explain the implementation of the module construction	Student does not consider all aspects of CI implementation. Very poor /unable to explain the implementation of the module construction
Module Functionality	20%	The presented modules of the system work correctly and completed at the time of review.	The presented modules of the system work properly but it required minor effort to complete. (Mostly working)	The presented modules of the system are partially functional at the time of review. Most of the modules are not completed. It requires a major effort to complete	System is not built or functional at time of review.
